THE COMPASSION TO CARE.

For more than twenty years, Maryland Oncology Hematology (MOH) has contributed greatly to the campaign against cancer and diseases of the blood by offering advancements in technology, treatment, early detection and clinical trials. For residents throughout Columbia this means the chances of beating cancer are better than ever.

Illustrating the outpatient emphasis of cancer treatment, MOH's cancer care and blood disorder specialists work closely with you and your family to create an individual treatment plan that provides for your physical and emotional health, all in the familiar setting of your community.

MEDICAL ONCOLOGY

Through its physicians and highly skilled oncology clinical staff, Maryland Hematology Oncology offers quality care for patients battling all types of cancers.

The MOH team works with patients to ensure that they are receiving the best, individualized treatment plan possible. Each patient's progress is closely monitored and education is provided for the various forms of cancer and the temporary side effects of chemotherapy.

HEMATOLOGY

Maryland Oncology Hematology specializes in hematology which is the field of medicine concerning the blood, and the generation of blood in the bone marrow. Hematology studies the red and white blood cells, their relative proportions and general cell health and the diseases that are caused by imbalances between them, notably leukemia, anemia, Hodgkin's disease, multiple myeloma and lymphoma.

CLINICAL RESEARCH

Because Maryland Hematology Oncology is committed to providing the best available care to all of its patients, research is and will continue to be the cornerstone of the organization.

MOH participates in many clinical trials, which show us what works (and what doesn't) in medicine. They are the best way for doctors to learn what is safe and effective in treating diseases such as cancer. Such research offers MOH access to new investigational drugs, reduces treatment-related side effects and introduces new methods of care.
